Novatek unprinted shrink film

Outstanding performance and reliability

On a practical level, shrink film is now widely regarded as the ideal solution to protect goods both in storage and transit. It also helps you to meet your environmental commitments as it is 100% recyclable.

Moreover, within the shrink film market, bpi.films' range is widely recognised as providing the ultimate in product performance and consistency delivering trouble-free wrapping time after time.

And, needless to say, a production line running consistently is one running cost-effectively.

The most modern blends on the market

State of the art polymer technologies and extrusion equipment with close tolerance gauge control enable bpi.films to offer customers the ultimate collation shrink film.

We have developed an impressive range of thinner co-extruded films which maximise film strength and optical properties and can even negate the need for trays.

High performance and product consistency time after time.

Bespoke films

Unprinted film is very flexible and can be manufactured to bespoke specifications for specialised running conditions or particular machines. Equally, its physical properties can be tailored according to the actual product being wrapped. For example it can be micro-perforated to allow for moisture transmission or to help reduce stress corrosion.

Client partnership

For us, product support starts before a delivery, not after. Our team is experienced in working with clients to deliver bespoke solutions right from the product specification stage.

We make it our business to make sure we understand your needs, your machines and your methods of wrapping in order to provide the very best solution.

Outstanding versatility

We are also vastly experienced in wrapping varying geometric shapes, sizes and non-traditional quantities whilst still maintaining outstanding appearance and strength.

Superior service and support

As part of the BPI Group, we offer security and continuity of supply, together with the peace of mind in knowing that no other manufacturer has so many dedicated production lines.

That said, like all bpi.films' products, our shrink films come with responsive technical support and expertise – so we're there when you need us.

Clearly seeing
the benefits.
